

## Training Course

Certified training for the safe use, erection and dismantling of mobile access towers...

...using the 3T Through the Trapdoor Method.

The law requires that personnel using and erecting towers must be competent and qualified to do so. Sending your employees to one of our training days will ensure they are trained to a high level of competence to carry out inspections, create safe systems of work and to understand employees' responsibilities.

A one day course at our dedicated training centre will include:

- Course registration.
- Course introduction.
- A theory session covering the Health and Safety at Work Act (1974) and the Working at Height Regulations (2005).
- Safe systems of work, component use and inspections.
- Lunch is provided.
- Practical session on the safe erection and dismantling of a mobile access tower using the approved 3T Through the Trapdoor Method.
- Course evaluation.
- Q&A session.

Certification is valid for 5 years on successful completion of this course.
